

Task 1 - Social Media Analysis on Excel

1. Identify which post or content type received the highest number of total shares.

L	M
Content Type	Total Shares
Text	13094
Image	18617
Video	440197
Reel	444520
Carousel	25182
Highest Total Shares	Reel

- Formula used: **=SUMIF(D:D, L2, I:I)**

- **Insight:** Reel content received the highest total shares (444,520), narrowly ahead of Video (440,197). Text, Image, and Carousel performed far lower.

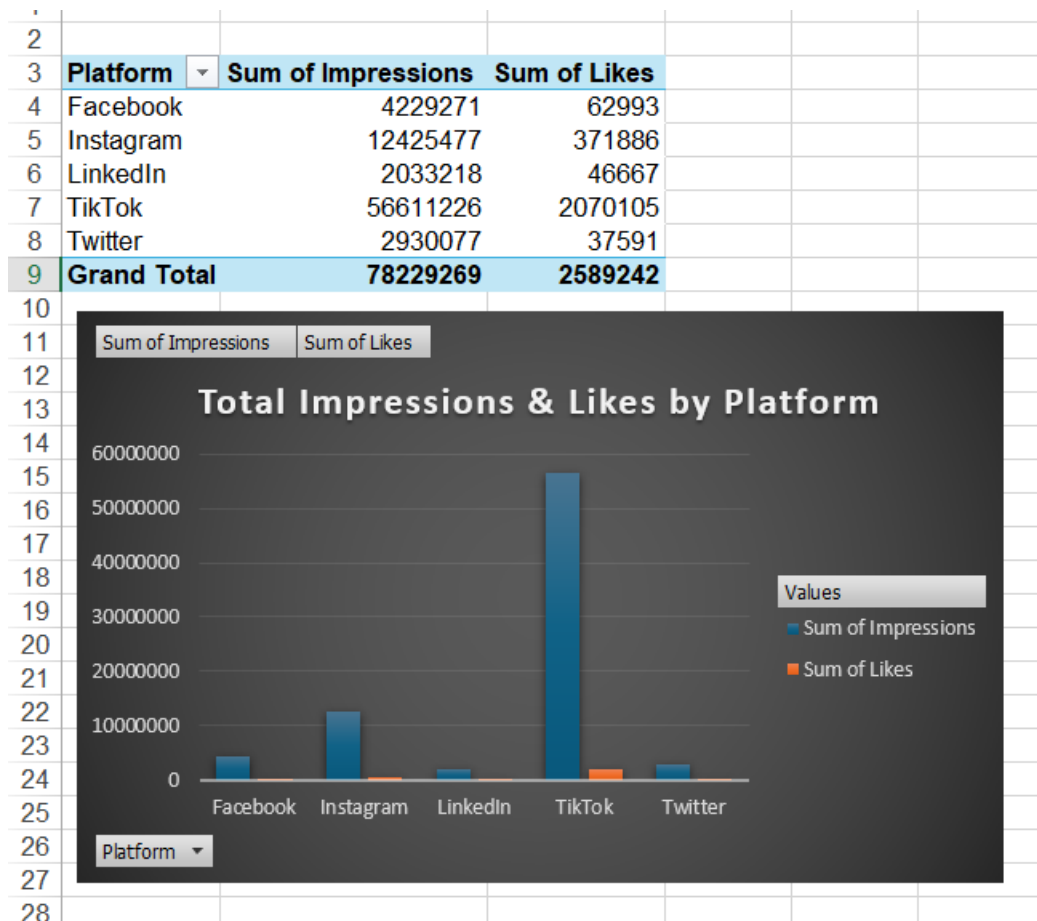

2. Create a new column titled "Engagement Rate" and calculate it for each row by dividing the total engagements (likes, comments, and shares) by the total impressions.

SUM										
	A	B	C	D	E	F	G	H	I	J
	Post ID	Platform	Post Date	Content Type	Impressions	Reach	Likes	Comments	Shares	Engagement Rate
1	POST-60001	Facebook	01-28-2025	Text	24,500	7,733	383	68	188	$=(G2+H2+I2)/E2$

• Formula used: $\text{Engagement Rate} = (G2+H2+I2) / E2$

• **Insight:** Engagement Rate lets you compare post performance independent of audience size — a post with fewer impressions can still have a higher engagement rate if it drives more interaction relative to reach.

3. Create a Pivot Table to summarize the total impressions and total likes grouped by each social media platform, and insert a bar chart to visualize this data.

- **Method:** Inserted a PivotTable with Platform in Rows, Sum of Impressions and Sum of Likes in Values, then inserted a clustered bar chart from the pivot data.
- **Insight:** TikTok dominates both metrics (56.6M impressions, 2.07M likes) — more than 4x Instagram's impressions, the next highest. LinkedIn and Twitter show the lowest totals on both metrics.
